Pricing and Revenue Management

Dr Keith Mason

Head of Air Transport Management Group, Cranfield University

Airline Pricing

"The price of an airline ticket is one of the great mysteries of modern life. It costs one price if you buy it over the phone and another if you buy it in person, one if you buy it this morning and another three hours from now. It practically defies the laws of physics."

Senator Ron Wyden, Introduction to S 383 Airline Passenger Fairness Act

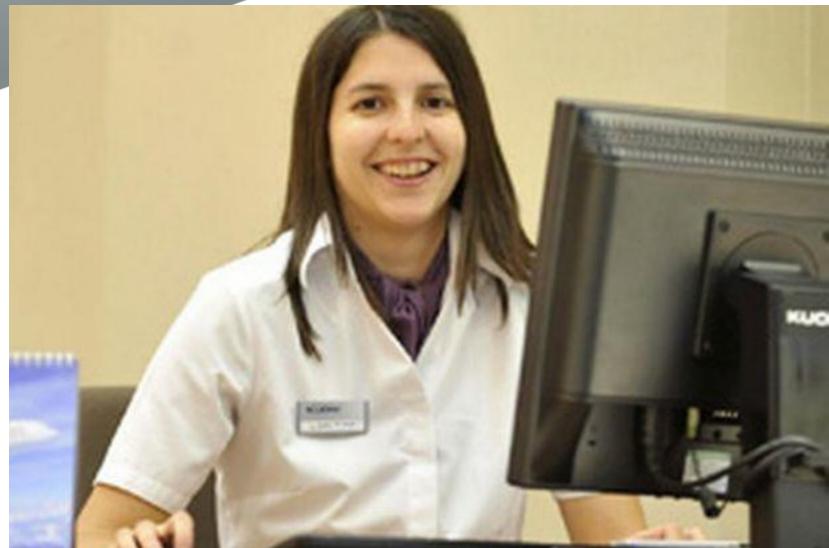

Ols style travel agents....

Or maybe more friendly...

Setting Pricing objectives

Profit maximisationMarket share maximisationBreak-even

- Survival
- Match competitors
- •Predatory pricing (not legal)
- •Send signal about the quality of the product
 - Airlines pricing objectives may vary from market to market and route to route
 - Pricing policy should not be considered in isolation but in relation to load factor and cost

Key Factors Affecting Pricing Strategies

- Supply factors
 - Regulatory regime (regulation vs liberalisation)
 - Capacity in the market
 - Cost of service
 - · Customers needs are different
 - Different customer needs impose different costs
 - Competition
 - Direct (including low cost carriers)
 - Indirect
- Market Factors
 - State of economy
 - Customers willingness to pay
 - Demand elasticity

Fare Type

• Normal/basic fares

- First class
- Business or executive
- Economy

Promotional Fares

 Route specific - fares are subject to restrictions: Min/Max stay Saturday night stay Departure time restrictions Advance purchase time requirement Routing (round trip, indirect service)

Problems with Network Carriers' Pricing

- Too many fare types and fare classes
- Too many conditions and restrictions
- Complex structure
- No clear pattern of change over time
 - Dynamic Revenue Management
- Growing gap between restricted and unrestricted fares
- Obsession with market share and load factor growth at the expense of profit

BA Fares - London to Amsterdam

	Return Fare
Lowest Economy *	£159
Unrestricted Economy	£460
Unrestricted Business/Club	£514

Fares quoted 20th June 2013 for 26^{thAug} 2013 day return One way fares exclude taxes, fees and surcharges *Restricted to certain flights on certain dates

BA Fares - London to Singapore

	Return Fare
Lowest Economy *	£842
Unrestricted Economy	£1,830
Unrestricted Business/Club	£5,854

Fares quoted 27th Aug 2012 for 8thOct 2012 one-week return *Restricted to certain flights on certain dates

Demand profile for a flight

Capacity/rev/yield management required Cranfield

Time before departure

Yield management or revenue management?ranfield

• 300 seats: Full fare @ \$1,900, Discount fare @ \$1,300

- Would you prefer
 - a) 50 Full fare and 250 Discounted
 - b) 190 Full fare and 50 Discounted
 - c) 135 Full fare and 135 Discounted?

	Rev	Yield	Load Factor
а	(50*1900)+(250*1300)=\$420,000	420000/(50+250) = \$1,400	((50+250)/300)*100 = 100%
b	(190*1900)+(50*1300)=\$426,000	426000/(190+50) = \$1,755	((190+50)/300)*100 = 80%
С	(135*1900)+(135*1300)= \$432,000	432000/(135+135) = \$1,600	((135+135)/300*100 = 90%

Source: Busuttil

Yield management the problem

- Airline objective is to maximise revenue for each flight
- Yield management is better called revenue maximisation
- The process gambles on the existence of a future customer that is prepared to pay more for a seat than a real customer today
- Leisure travellers are prepared to pay less but tend to book earlier
- Business travellers are prepared to pay more but book much later
- Therefore the airline might seek to adopt differential pricing (i.e. charging different prices for the same product)

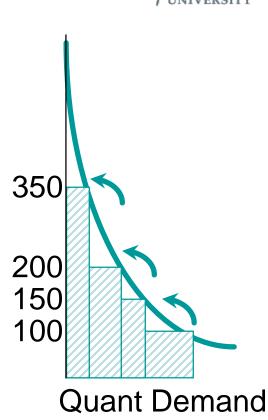

curve

Source: Busuttil

Why do your prices have so many conditions?

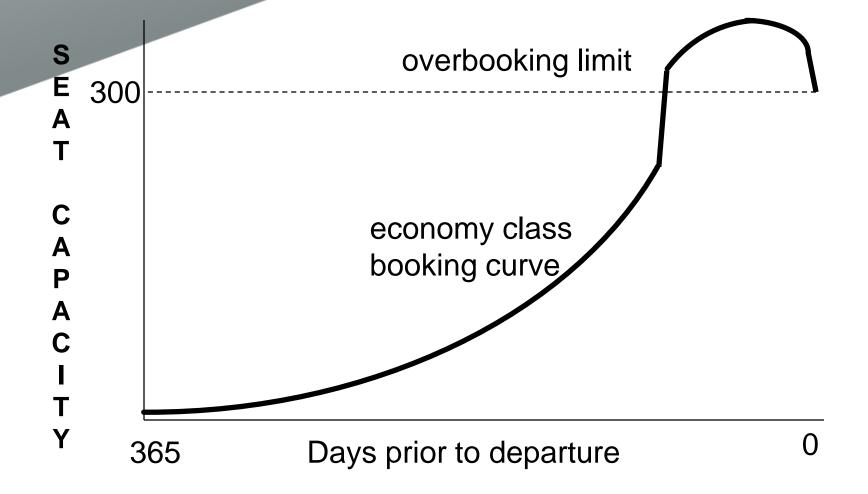

- Anti-marketing: or how to make your product less attractive to the late-booking high-yield customer
 - stay Saturday night
 - book three months in advance
 - non refundable/endorseable/reroutable
 - you can even get them to dress as Elvis!

Cra

People will still shop around for the lowest price they can get, but you can force them to progressively "trade up" to the more expensive seats as you approach day of departure. Why sell more seats than you have seats available?

The yield management toolbox

- Fare levels
 - The prices charged for each fare class
- Fares classes
 - The number of seats available in each fare class
 - May be up to 100 (or more)
- Overbooking
 - Acceptance of bookings in excess of capacity to minimise the number of unused seats at departure
 - Tempered with denied boarding cost (of economy pax)
- Itinerary Control
 - Discrimination on one sector between passengers travelling on different itineraries across a network (Alliance challenge)

LCC revenue Management approach

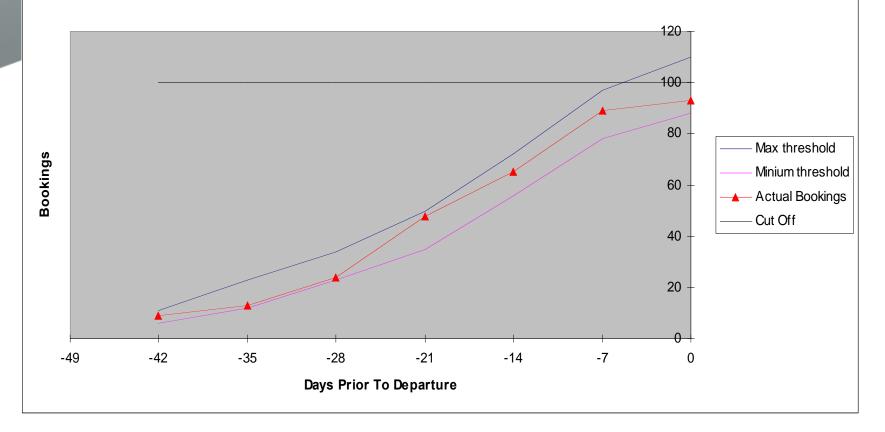

- EasyJet introduced a one-way pricing model that has now been adopted by other LCCs and network carriers in competition with LCCs
 - One price in the market at one time
 - Price starts low, furthest away from departure
 - When (say) 10 seats are sold at the lowest price the price is increased by (say) £5 or £10
 - Demand is managed by either increasing prices quickly (to drive up yield) or retaining price low (to stimulate sales)
 - Overbooking not required
 - People can change tickets for an admin fee and the difference in price between current price and the fare customer bought ticket for

LCC Rev Mngt in action

- Barcelona Carnival
- Valentine's day

Conclusion

- As deregulation spreads and competition intensifies there will likely be a reduction in fares at the lower fare end of the market
- Increased use of Internet provides "transparency" for travellers increasing consumer power and those looking for a bargain will shop around more
- Network carriers respond through
 - Reducing the number of fare types
 - Offering one-way fares
 - Reducing or eliminating restrictions on fares
 - Increasing the number of tickets sold on-line
 - Adapting low cost carriers revenue management style
